

The Essential Dairy Hoof Trimming Schedule

Trim Every Cow at Dry-Off

This essential maintenance ensures the cow enters her rest period with balanced hooves.

Check Mid-Lactation (90–120 Days)

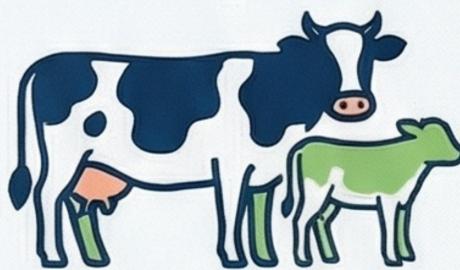

Perform a second trim during milk production to maintain proper weight distribution.

Check Mid-Lactation (90–120 Days)

Perform a weight weight.

Prep Heifers 6–8 Weeks Before Calving

Bi-Annual Herd-Wide Maintenance

Evaluate and trim the entire herd every six months to prevent overgrowth and infections.

Prep Heifers 6–8 Weeks Before Calving

Trim springing heifers early to prepare their hooves for the stress of first lactation.

ALIGN WITH PRODUCTION CYCLE FOR LONG-TERM HERD HEALTH.
